

About TeleCommunication Systems, Inc.

TeleCommunication Systems, Inc. (TCS) (NASDAQ: TSYS) is a leading provider of mission-critical wireless data solutions to government customers, public safety, and carriers.

TCS produces wireless data communications technology solutions that require proven high levels of reliability. TCS' wireless data offerings include secure deployable communication systems and engineered satellite-based services; location-based wireless and VoIP Enhanced 9-1-1 services; messaging and location service infrastructure for wireless operators; and commercial location applications, like traffic and navigation, using the precise location of a wireless device.

TCS communication services facilitate the transmission of voice, video, and data. Our integration with public switched networks, global information networks, intelligent data servers, global computer network gateways, and intelligent peripherals enables wireless transmissions and information processing for sending and receiving.

Whether providing a highly secure link back to government agencies, connecting people to life-saving emergency services, or pioneering new messaging and location-based services and applications, TCS delivers competitive, reliable, and secure solutions. Our customers include government agencies as well as leading wireless and VoIP carriers around the world.

Headquartered in Annapolis, Maryland, TCS has been a public company since the autumn of 2000 and is traded on the NASDAQ as TSYS.

TotalCom™ Managed Network Services

Tried, Tested and Proven.
Connections that Matter®

Core Services

Uplink

Secure network of owned and partner teleports providing full global coverage

Satellite and terrestrial bandwidth

Private, secured point to point and point to multipoint connections across our C, KU, KA and X Band satellite and terrestrial networks.

On-network colocation

Managed colocation services available at our teleports and terrestrial PoPs to ensure the highest resilience and performance in your network, while keeping costs down.

Continuity of Operations

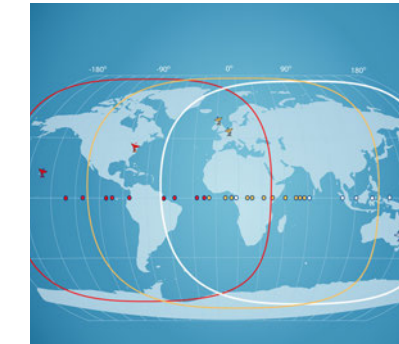

TCS's industry leading solutions for continuity of operations can be extended to your remote sites and operators using our satellite and terrestrial systems for resiliency and redundancy.

Occasional Use

TCS offers occasional use capacity for special events or short duration high bandwidth requirements. Our monthly maintenance services ensure your network remains at a state of readiness between events.

Geostationary and Low Earth Orbit solutions

TCS manages a full suite of satellite solutions based on Geostationary and Low Earth Orbit capacity to allow one true source for your secure global data, voice, video, personal and machine-to-machine (M2M) communications.

Interactive Services

Satellite Internet & Broadband

TCS offers point-to-point, point-to-multi-point and meshed satellite connectivity through our global network of teleports, or as private networks. Our end-to-end services include hardware, colocation, uplink, capacity and are all backed by our world-class implementation, monitoring and technical support.

TCS also provides shared networks for lower prices than private bandwidth, and TCS provides much lower contention ratios than many of our competitors to ensure the highest QoS for our clients, along with a range of turnkey services to provide the best experience available in the industry – as our past performance shows.

TCS offers coverage across the globe, with shared services available in most regions and full design, installation and maintenance services.

TCS' full line of products and services provide government unrivalled options for true global communications. Our satellite offers are designed to work as standalone systems or in concert with our industry leading SNAP, Tropo, wireless, Executive Kit, microsat (X-Band) and baseband systems.

VoIP and Secure HD Videoconferencing

TCS offers turnkey voice and videoconferencing services to make your user experience as simple, cost-effective and reliable as possible. TCS offers the ideal package for agencies with employees needing to communicate in fluid situations, across one, or multiple, regions.

Our turnkey VoIP services packages include all the necessary hardware and allow US numbers to be allocated to any user anywhere in the world, with full virtual office facilities for a low, fixed monthly price that includes unlimited usage.

Our unlimited usage, HD videoconferencing packages require no pre-booking and provide one-to-one and group videoconferencing through our Virtual Meeting Rooms. Remote users need no special equipment, just a quality webcam or other AV input into a PC.

TCS VoIP and HD Videoconferencing are ideal cross-functional tools for Telemedicine, field personnel, eLearning, corporate communications and even security applications.

Reactive Services

Rapid Deployment & Emergency Relief systems

- Easy to deploy, lightweight VSAT and portable terminals
- Low contention ratio satellite access ensures effective services where no others are available
- Full Internet, VoIP, videoconferencing and wireless integration options
- Proven solutions comprising TCS' own SwiftLink and COTS solutions
- Preconfigured and ready to activate upon arrival

Core Asset Tracking

- Global fleet, asset and personnel tracking solutions
- Global AIS data provisioning
- Global Systems Control, voice and messaging solutions

Professional Services

- Earthstation design, implementation and operation for infrastructure networks
- Teleport, TT&C, operations centers, remote hubs, hybrid networks
- Global survey, installation, in-theatre support and maintenance provided by our seasoned Field Service Engineers
- Worldwide technology training and documentation services
- Custom hybrid solutions for secure or hostile environments

TCS' unique experience and product portfolio can provide you with satellite, terrestrial, wireless and even atmospheric based networking solutions – or a combination of these to ensure your seamless operations in any environment.
